

## **Ascent Vision and CyPhy Works Announce Collaboration to Deliver Persistent Flight with Precision-Imaging**

*Partnership Pairs Leading Imaging Systems with Tethered PARC Drone to Meet Growing Customer Demand*

**April 25, 2017, Bozeman, MT** -- Ascent Vision, specialists in Precision Gimbal Sensor Technology, and CyPhy Works, the drone leader in long-duration flight, announced today a new partnership to meet the growing customer demand for business critical UAV solutions that require precision-imaging and persistent flight.

“We’re very excited about the potential of this partnership,” said Lance Vanden Brook, CyPhy Works CEO. “PARC’s long-term flight capabilities coupled with Ascent Vision’s deep experience in the design and manufacturing of quality Gimbaled technologies allows us to offer customers a truly differentiated solution.”

Ascent Vision’s CM100 imaging system is a Dual-Sensor Gyro-Stabilized Gimbal which has been specifically designed for use on unmanned aircraft. With its light weight and size, the CM100 is easily integrated and mounted into almost any platform with ease. The innovative CM100 provides superior performance and cost-effective value with reliable results.

CyPhy Works’ PARC™ (Persistent Aerial Reconnaissance & Communications) is a portable, tethered drone that has been designed for long-endurance flights, potentially lasting hundreds of hours. The tether serves as PARC’s power conduit, and communications and video also flow over its patented Kevlar-reinforced microfilament tether.

“We are pleased to expand our relationship with CyPhy Works,” said Tim Sheehy, Ascent Vision Founder and CEO. “Having our imaging systems selected as the preferred payload on such a well-regarded unmanned aerial platform is a significant milestone for Ascent Vision. The integration of our CM100 gimbal with the PARC provides operators with an innovative, reliable system for a variety of missions.”

Both companies are exhibiting at the upcoming AUVSI XPONENTIAL in Dallas, Texas, May 8-11, 2017. Both companies will be displaying a PARC with a CM100 in their booths. More details on the partnership will also be disclosed at the show.

About CyPhy Works:

CyPhy Works, Inc. is the leading persistent drone company. Our advanced aerial platforms are designed for customers in defense, public safety, security, law enforcement, oil & gas and a variety of other industries. CyPhy is known for delivering rugged, high-endurance tethered drones with secure payload data and autonomous flight.

About Ascent Vision:

Headquartered in Bozeman, Montana, Ascent Vision specializes in the design, manufacturing and distribution of precision-imaging Gimbaled technologies for a wide range of applications. Capabilities also include the design and manufacture of unique platform integration mounts and proprietary software programs for its full line of Gimbals. Ascent Vision products and systems are utilized for manned and unmanned aerial applications, ground-based sensing, maritime vessels and other platforms benefiting from Gyro Stabilized camera systems.
